Arbeitspensum
Vollzeit

Arbeitsort
Max-Planck-Straße 25, 61381, Friedrichsdorf, Hesse, Germany

Beschreibung

To strengthen our team, we are currently looking for several **plastics and rubber technologists** (m/f/d)

Zuständigkeiten / Hauptaufgaben

Plastics and rubber technologists (m/f/d) manufacture everything that can be made from polymer materials – from toys to rain gutters, from car tires to PVC windows, from plastic packaging to car dashboards, from pacifiers to aircraft parts and, in our case, products for the medical and pharmaceutical industries.

The main task for plastics and rubber technologists is to set up and configure production machines, optimize them, and monitor product quality throughout the entire production process. They are also responsible for production control, production monitoring, and production planning.

As experts in polymer materials, they know their specific properties and apply their knowledge on a daily basis when programming, adjusting, and optimizing production machines.

Qualifikationen / Anforderungen

You have at least a secondary school diploma, are good with your hands, and have technical skills. You are flexible, independent, and reliable. You enjoy working in a team and are looking for an exciting challenge.

Join our team—we look forward to getting to know you better. Please send us your detailed application documents.
